

# ccTLD Workshop: Attack and Contingency Response Planning

Updated & Expanded

- Learn How to Identify and Assess Risks to Your Operations
- Understand the Impact of Threats and Vulnerabilities
- Be Able to Create, Document & Exercise a Response Plan

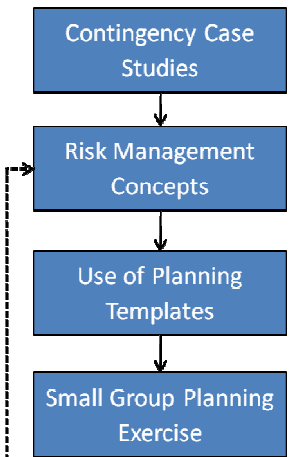

This four day workshop introduces ccTLD executives, managers, and operations staff to contingency response planning – the art and science of establishing a robust program focusing on operational risks to information assets. In this expanded course, students are introduced to methods for conducting contingency planning and assessing risks. An 8-step process and innovative templates tailored for ccTLD operations greatly simplify the art of conducting a risk assessment. Students will participate in a series of facilitated, scenario-based discussions on exercising, risk and response, focusing on actionable mitigation strategies. Upon completion, students will be able to guide the organization in creation of contingency response plans. **Prerequisites: None**

## COURSE HIGHLIGHTS

- Δ Learn Methods to Assess Operational Risk Via a ccTLD Tailored Approach
- Δ Process Based on Continuity Planning Risk Assessment & Threat Awareness
- Δ Be Able to Highlight Gaps in Your Organization’s Awareness, Capability, Knowledge, and Preparedness Levels
- Δ Learn the Importance of and How to Prepare a Contingency Response Plan

- Δ Learn and Share Mitigation Strategies During Facilitated Discussions
- Δ Focus Planning On Critical Objectives to Ensure Continuity of Operations
- Δ Understand Today’s Threats & How They Can Affect Your Operations
- Δ Examine and Learn From Case Studies on Recent Contingencies
- Δ Share With, Learn From, and Network with Other ccTLD Operators

Threats & Vulnerabilities

Impact & Risk

Mitigation Strategies

*This course is one of a three part ccTLD capacity building program. The Table-Top Exercise (TTX) course teaches methods of designing and running table-top exercises. The Registry Operations Curriculum (ROC) is a set of hands-on courses which cover topics ranging from basic technical foundations of a ccTLD to security implementation and incident response.*

**For more information on these courses, contact your regional TLD or ICANN representative**
